Quiz Instructions

1 attempt

hint: See the slides.

Question 1 17 pts

Here is the position (on the number line) of an object as a function of time

hint: how do u find V from x ? see slide

its velocity is increasing

Its velocity is constant

its velocity is 0

its velocity is decreasing

Question 2 17 pts

This graph shows the distance (from the origin) of a moving object as a function of time. And the kinematics equation of the motion (equation of the graph).

- ☐ speed is increasing, the acceleration is not constant
- ☐ speed is 0
- ☐ its speed is constant
- ☐ its speed is increasing, acceleration is constant

Question 3 17 pts

Here is the position of an object as a function of time.

☐

phase I -> it moves at a constant velocity @ right | phase II -> it stops | phase III -> it moves at constant velocity @ left

☐

phase I -> it moves at constant speed @ right phase II -> it stops phase III -> moves constant velocity @ right

☐

phase I -> it speeds up @ right phase II -> it stops phase III -> it slows down @ left

☐

it moves @ right the whole time

⋮

Question 4 17 pts

The initial velocity if a gecko is 5mph. It is speeding up at a constant rate and reaches 25 mph.

What is its average velocity? (remember the equation. See slide with equations)

☐

+20mph

☐

+ 15mph

☐

+10 mph

☐

can not be determined

⋮

Question 5 17 pts

An object is moving with constant non-zero velocity in the +x direction. The velocity versus time graph of this object is

☐

a straight line making an angle with the time axis.

☐

a vertical straight line.

☐

a horizontal straight line

☐

a parabolic curve.

⋮

Question 6 17 pts

A cart with an initial velocity of 5.0 m/s to the right experiences a constant acceleration of 2.0 m/s² to the right. What is the cart's displacement during the first 6.0 s of this motion?

☐

66 m

☐

10 m

☐

80 m

☐

55 m
