A strand of human DNA is **2.5 nanometers (convert to m.)**.

The width of a human hair is about 50 micrometer (convert to m)

What is the ratio size hair/size DNA

hint: as explained in class. if you see nano you substitute by $E-9$ (10^{-9}) m. and substitute micro $E-6$ (10^{-6})m. Use your calculator to find the ratio . when computing ratio you need to have the same units for the numerator and denominator.
